Dementia

Dementia is a neurodegenerative brain disease characterized by difficulties with memory, language, problem-solving and daily activities.

One new case worldwide every 3 seconds

Hidden Epidemic with prevalence of 7.4% in India in people over 60

9 million with Dementia in India. Will increase to 17 million by 2036

THE NEED OF THE HOUR

With no cure in sight, families face immense physical, financial and emotional burdens. Family caregivers urgently need accessible quality care, clinical services, professional support systems and practical resources to cope with the challenges.

Dementia India Alliance

Dementia India Alliance (DIA) is a national, family carer-centered non-profit organization dedicated to improving the lives of those affected by dementia and their families. Established under the Societies Act, DIA brings together families, caregivers, communities, and healthcare organizations to create a network of support and empowerment for people with dementia and their caregivers. We work to address the challenges of dementia by advocating for better healthcare services, promoting early diagnosis, facilitating support systems and creating awareness within communities to foster empathy and reduce stigma.

Our Purpose

At DIA, we aim to bring help and hope to individuals living with dementia and their family caregivers. We are committed to creating a supportive environment that addresses their needs and challenges.

Our Team

The founding team of Dementia India Alliance comprises a diverse group of organizations and individual family caregivers with extensive experience in dementia care. Our advisory board includes industry leaders who provide invaluable insights into organizational strategy, resource management and sustainability.

Strategic Partners

- National Institute of Mental Health and NeuroSciences (NIMHANS)
- Ministry of Social Justice & Empowerment, Government of India (MoSJE)
- Centre for Brain Research, Indian Institute of Science, Bangalore (CBR)
